NMS SERVICES
Specific Scripting - Web Interface Tuning - Reports

In order to implement specific monitoring features to enhance your Solarwinds Orion possibilities, we can assist you by devellopping some specific scripts.
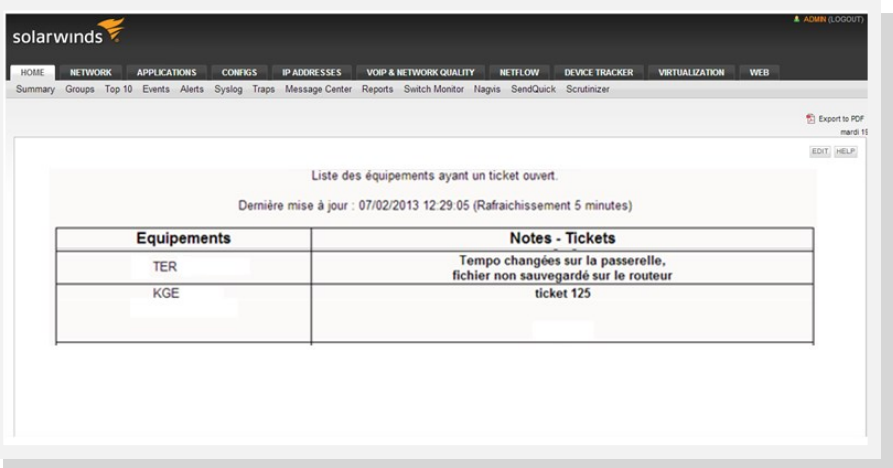

Web Interface Logging Script & Inventory:

This kind of script allows displaying log events received by Orion, in web interface (SNMP Traps, Syslog …) and customized according your needs. (Examples: Backup tasks, Network Link Up—Link Down …).

On the same way, is it possible to display the monitoring data in specific HTML content offering to users a completely customized display of particular monitoring informations.

# Specific Scripting - Web Interface Tuning - Reports

Web Interface Customization:

For specific displaying, we can also customize Solarwinds Orion web interface, in order to integrate specific page or web site. This can allow to each user to have specific monitoring information adjusted to the specific needs.

Report Customization:

For specific displaying (Intranet for example), we use our own database and store values. The following example show you an availability table which contains : Yesterday, Last 7 Days, Last 30 Days, Last Month and Custom.

It allows the customer to request values through more simple SQL query.

Example of Database

We also create some custom reports :
* Number of issues during a period
* Availability for specific Universal Device Poller
* Specific inventory report...

Workload

Scripting (1 - 5 Days)	Development	Implementation
Web Interface Logging Script (2 - 3 Days)	X	X
Web Interface Inventory (2 - 3 Days)	X	X
